The moose (North America) or elk (Eurasia), *Alces alces* is a member of the New World deer subfamily and is the largest and heaviest extant species in the Deer family. At some point every year, my thoughts turn to it. A hunger to see it, breathe the mountain air, gaze upon the abundant wildlife, dine at my favorite restaurants, and hike favorite trails, inevitably begins to gnaw. Re: Mt. Rushmore, Yellowstone and Grand Canyon And another thought that goes along with what DL said, there is so much to see in that 'northern' part of the Rockies that it would be a real total shame to miss it so you could spend so much travel time to get all the way to Arizona to see the Grand Canyon. Across more than 20 million acres, three states, and two national parks, the Greater Yellowstone Coalition works to defend the wild heart of North America. - Moose Goes To Yellowstone
