Thyroid health affects all aspects of well being, both genders, all ages. It is estimated that 200 million people in the world have some form of thyroid disease. Treatment for thyroid disease depends on the cause, severity of symptoms, and the levels of hormone production. Therapy for disorders that cause hyperthyroidism may involve radioactive iodine to destroy part of or the entire thyroid gland to stop excess production, anti-thyroid drugs, or surgery to remove the thyroid. Articles and supplement reviews published on Thyroid Advisor are carefully reviewed and edited by qualified medical practitioners, experts, and thyroid patient advocates, with their respective certificates and medical degrees, to ensure the best available information available on this website. Background: Thyroid disease in pregnancy is a common clinical problem. Since the guidelines for the management of these disorders by the American Thyroid Association (ATA) were first published in 2011, significant clinical and scientific advances have occurred in the field. - Thyroid Disease Thyroid Disease At Different Ages
