I study ARITHMETIC GEOMETRY. Especially, I am mainly interested in: p -adic Hodge theory and related topics ((ϕ, Γ) -modules, p -adic differential equations...), Although the formal definition of an elliptic curve is fairly technical and requires some background in algebraic geometry, it is possible to describe some features of elliptic curves over the real numbers using only introductory algebra and geometry. Throughout the year, IHES organises numerous events: seminars or informal talks, series of lectures and summer schools or international conferences over one to several days which can bring together a hundred or so participants, who come from Paris and surrounding area, other parts of France or other countries. - Topics In Almost Automorphy
