One theory is that this lens' focal length is closest to the 43.2 mm diagonal of the 35 mm camera's 24 x 36 mm frame. Another is that its field of coverage (40° horizontally, 46° diagonally) is roughly equal to what one human eye can view with relative clarity. Simply, the 50 mm standard lens gives an "honest" image, which is extremely close to what the "unaided" eye sees. Apple Footer \* Trade In: iPhone XR and XS pricing is after trade-in of iPhone 7 Plus in good condition. Additional trade-in values require purchase of a new iPhone, subject to availability and limits. Sales tax may be assessed on full value of new iPhone. Fingerprint identification, known as dactyloscopy, or hand print identification, is the process of comparing two instances of friction ridge skin impressions (see Minutiae), from human fingers or toes, or even the palm of the hand or sole of the foot, to determine whether these impressions could have come from the same individual. The flexibility of friction ridge skin means that no two finger ... Login to pay your bill, manage your services and much more at My Verizon. - Klik Showcase Photography (volume 8)
