In 2009, Aaron Haiman, a student of Tom Hahn, studied the Evening Grosbeak complex in greater detail and found that bill morphology differs among call types, especially among females. These differences he suggests could affect mate selection and speciation. Haiman also examined call type distribution across North America and created a generalized distribution map of the 5 call types. Description. Cette espèce mesure de 14 à 16 centimètres. Le bec est de couleur corne. Le mâle présente un plumage qui va du rose framboise clair au rouge pourpre vif.????? ?????????????????(EiPhonics 2015)
