Bar Graphs are a good way to show relative sizes. Instructions. Enter values (and labels) separated by commas, your results are shown live. Don't forget to change the Titles too! Bar Graphs are good when your data is in categories (such as "Comedy", "Drama", etc). But when you have continuous data (such as a person's height) then use a Histogram . It is best to leave gaps between the bars of a Bar Graph, so it doesn't look like a Histogram. Math Statistics: Bar Charts/Bar Graphs. A bar chart represents the data as horizontal or vertical bars. The length of each bar is proportional to the amount that it represents. There are 3 main types of bar charts. When constructing a bar chart it is important to choose a suitable scale to represent the frequency.
