For example, the dimensions of the matrix below are  $2 \times 3$  (read "two by three"), because there are two rows and three columns: [? ?].Provided that they have the same size (each matrix has the same number of rows and the same number of columns as the other ...General relativity (GR, also known as the general theory of relativity or GTR) is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics.General relativity generalizes special relativity and Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and time ...Password requirements: 6 to 30 characters long; ASCII characters only (characters found on a standard US keyboard); must contain at least 4 different symbols; - Noncommutative Structures In Mathematics And Physics (nato Science Series Ii: Mathematics, Physics And Chemistry, Volume 22)
