In this section we'll review some of the basics of dividing polynomials. We will define the remainder and divisor used in the division process and introduce the idea of synthetic division. We will also give the Division Algorithm. Note that the remainder in this division is 0 and is the last number on the right of the bottom row. We use the bottom row to give coefficients of 1, -3, and -4 for a final answer which is the same result as with long division: Free math problem solver answers your algebra, geometry, trigonometry, calculus, and statistics homework questions with step-by-step explanations, just like a math tutor. SEMITIC: A non-Indo-European family of languages including Arabic and Hebrew.. SEMIVOWEL: A sound articulated in the same way as a vowel sound, but which functions like a consonant typically. Examples include [w] and [y]. In some languages such as Welsh, these can function as graphemes for pure vowels. - Synthetic Division Method Examples
