

Download Xylem Structure And The Ascent Of Sap 2nd Edition

The first edition of this book was the first to provide an integrated description of sap ascension from an anatomical and functional point of view. Xylem. Xylem is a complex vascular tissue composed of water-conducting tracheids or vessel elements, together with fibres and parenchyma cells. Tracheids are elongated cells with lignified secondary thickening of the cell walls, specialised for conduction of water, and first appeared in plants during their transition to land in the Silurian period more than 425 million years ago (see

Cooksonia). All text is available under the terms of the GNU Free Documentation License. (???)
